

OPERATING SYSTEM FOR DISCLOSURE WORK

Claude Workflow System

Complete reference for how work flows from idea → build → run → learn → automate. One place to look, no scrolling through a long chat.

Readable on a phone · Printable on paper · Quick to reference

INSIDE THIS REFERENCE

- | | |
|-------------------------------|---------------------|
| 1. Workflow Overview | 5. Key Concepts |
| 2. Project Structure | 6. Conversation Map |
| 3. The Action Plan — In Order | 7. Long-term Vision |
| 4. Folder Structure | |

1 Workflow Overview

The North Star sits above everything. Step 0 — Vision — informs every other step. Each step bends back to serve it. Then seven steps, in order:

0 VISION ★	Vision NORTH STAR The North Star that informs every step. Why, and toward what.
1 BUILD	Build & Debug PERSONAL · COWORK Messy code lives here. Experiment, break things, iterate.
2 PROMOTE	Promote to Library → WORKFLOWS & ARCHITECTURE When proven, code moves into the library.
3 REVIEW	Pre-run Review TEAMS · CHAT Quality gate. Check before you run for real.
4 EXECUTE	Execution TEAMS · COWORK The actual run.
5 AUDIT	Audit TEAMS · CHAT The nuts and bolts of what actually happened.
6 DEBRIEF	Debrief PERSONAL · CHAT Feelings and learning — the trip home after the audit.
7 FOLD BACK	Fold Lessons Back → VISION + LIBRARY Update the Vision and the Library based on what you learned.

 **The loop:** Step 7 feeds back into Step 0 (Vision) and Step 2 (Library). The system gets a little smarter every cycle.

2 Project Structure

Two worlds — **Personal** and **Teams**. Within each, two kinds of project: **Chat** (conversation, thinking, feedback) and **Cowork** (executable work and code).

Personal	Teams
Disclosure Strategy CHAT High-level strategy & thinking	Running Disclosures CHAT Master tracker — status across all cases
Personal Explorations CHAT Open-ended exploration, feelings, learning	Disclosure [Case Name] CHAT Pre-run review · audit · debugging
Workflows & Architecture COWORK The library — proven code, playbooks, diagrams	Disclosure [Case Name] COWORK Execution — the actual run

The Action Plan — In Order

Phase 1 — Cleanup & Foundation DO FIRST

- ☐ **Create "Claude Cleanup and Reorganization" project**
Audit files · decide keep / move / delete · set up folder structure
- ☐ **Create "Workflows and Architecture" project (the library)**
Pin this conversation summary · pin the workflow diagram · create the Value Timeline document

Phase 2 — Setup Before Next Disclosure PREPARE

- ☐ **Set up folder structure** — Personal and Teams projects
- ☐ **Create "Lawyer Ideas and Requests" project** — Teams Chat
- ☐ **Create Lawyer Playbook Template** — one page, simple

Phase 3 — Execution: Disclosure Two & Beyond RUN IT

- ☐ **Run Disclosure Two using the new workflow**
Follow North Star + seven steps · document as you go · debrief in Personal · extract the lawyer playbook
- ☐ **After Disclosure Two → update Value Timeline with real data**

Phase 4 — Optimization: After 2–3 Disclosures AUTOMATE

- ☐ **Design Agent / Automation Strategy** — assess what can be automated
- ☐ **Build & Test First Agent** — lives in Workflows & Architecture, executes the proven playbook
- ☐ **Hand Off to Lawyer** — agent runs autonomously; you review and approve

4 Folder Structure

CLAUDE WORKSPACE

PERSONAL

- Disclosure Strategy [Chat] strategy & thinking
- Personal Explorations [Chat] exploration · feelings · learning
 - ▲ Step 6: Debrief lands here
- * **Workflows & Architecture** [Cowork] ← THE LIBRARY
 - └ pinned: workflow diagram
 - └ pinned: conversation summary
 - └ Value Timeline document
 - └ proven playbooks
 - └ agents (later)

TEAMS

- Running Disclosures [Chat] ← MASTER TRACKER
- Disclosure [Case Name] [Chat] pre-run · audit · debugging
- * Disclosure [Case Name] [Cowork] execution – the actual run

HOW CONVERSATIONS FLOW BETWEEN PROJECTS

5 Key Concepts

● Cowork vs. Chat

	COWORK	CHAT
What	Executable, actionable work	Conversation, thinking, feedback
Contains	Code or structure you'll reuse	Linear discussion
Reused?	Yes — pulled into other work	No — doesn't need pulling elsewhere

● Projects vs. Random Chats

	PROJECTS	RANDOM CHATS
Shape	Grouped, related conversations	One-off, standalone
Theme	One theme, referenced repeatedly	No ongoing theme
Use when	You'll come back to it	You won't

● The Lawyer Playbook Separation

Keep the clean front-stage separate from the messy back-stage.

WHAT THE LAWYER SEES

- Clean deliverable
- Simple playbook
- Status updates

WHAT YOU BUILD INTERNALLY

- All the iterations
- The debates
- The cleanup
- The learning

● The Value Timeline

Three timelines side by side — the case for the system. The line bends down; without the system, it never does.

No System

before · every time

12–15 hrs / disclosure — flat, forever

System · D1

building

12 hrs

System · D2

refining

6 hrs

System · D3

executing

4 hrs

Automation · D4+

runs autonomously

30 min to trigger

6

Conversation Map

Which conversations to have, when, and where.

Start Next

"I need to clean up my Claude files"	CLEANUP PROJECT
"Help me document the disclosure workflow"	WORKFLOWS & ARCHITECTURE
"Help me create a folder structure template"	CLAUDE CODE

Start After Cleanup

"Help me organize the lawyer's requests"	LAWYER IDEAS & REQUESTS
"Help me create a playbook template"	FOR THE LAWYER

Start With Disclosure Two

"Let's run disclosure two using the new workflow"	ACTUAL WORK
"Help me debrief"	PERSONAL
"Help me package the value"	FOR THE LAWYER

Start After 2–3 Disclosures

"Help me design automation"	AGENTS & API STRATEGY
"Help me build an agent"	ACTUAL AGENT BUILDING

7 Long-term Vision

The automation path — three phases. You don't skip ahead.

PHASE 1

Do it manually

You're doing disclosures by hand. Learning the process, documenting it, debriefing.

PHASE 2

Build the playbook

You've done it a few times. You have a solid, proven playbook.

PHASE 3

Teach an agent

Using the Agent SDK and your API key, an agent follows that proven playbook.

The agent doesn't invent the process — it executes the one you've proven works.

1. Agents live in **Workflows & Architecture** — but only **after** you've proven the manual process.
2. The agent is the **automation version of a playbook that already exists**. No playbook, no agent.

Manual proof → Playbook → Agent (never the other way around)

*Update this reference in **Workflows & Architecture** whenever Step 7 folds new lessons back in.*
