

The Master Playbook

File naming, folders, the Dante & Holly workflow, and how to run it solo

One reference for the whole disclosure process — built to print, and to hand to anyone stepping in.

SECTION 1

Introduction & purpose

This playbook is the single source of truth for how we produce and file disclosures. It exists so that **any** disclosure — drafted by Dante, finished by Holly, or done start-to-finish by one person — comes out the same way: correctly named, in the right folder, with a clean revision trail, and ending as a finalised record in Clio.

Read it once end-to-end. After that, jump to the section you need: the **ground rules** when you're naming or filing; the **workflow flowchart** when you're unsure who does what next; the **solo instructions** when you're running a disclosure on your own.

THE ONE PRINCIPLE BEHIND ALL OF IT

The folder a document sits in tells you its **stage**; the initials in its filename tell you **who has touched it**. Keep those two things honest and the whole process stays legible — no version-number guessing, no lost drafts.

WHAT'S INSIDE

- 1 Introduction & purpose** Why this playbook exists and how to use it.
- 2 Ground rules — file naming & folder structure** The naming convention, the folders, and revision tracking.
- 3 Scenario transition guide** From Clio-centric today to Claude Teams as the drafting hub.
- 4 The workflow flowchart — Dante & Holly** Both lanes, the approval gates, and the handoffs.
- 5 Holly solo — front end, from scratch** Starting a brand-new disclosure on your own.
- 6 Holly solo — back end, finishing a started draft** Picking up a document Dante has already begun.
- 7 The disclosure checklist** The self-review quality gate, fillable and ready to print.
- 8 Agentic workflows — down the road** How automation fits once the process is proven.

Ground rules — naming & folders

File naming convention

20260601

initial disclosure statement

(D L)

- **Date first** — YYYYMMDD (here, 1 June 2026). Keeps files in chronological order automatically.

► **Plain description** in lowercase — say what the document is, no codes.

► **Initials in parentheses** — (D) = Dante drafted; (D L) = Dante drafted, Lawyer reviewed.
- **Add initials, don't replace** — the trail grows left-to-right: (D L D L).

► **One document, one name** — update the same file; never "final_final_v3".

► **No special characters** beyond spaces and the parentheses.

Done

finalised & filed

Final copy exported →

CLIO (system of record)

Revision tracking — one document's life, start to finish		
FILENAME	WHO & WHAT	NOTE ADDED
20260601 initial disclosure statement (D)	Dante — first draft	"First pass from template — flagged 2 gaps for Holly."
20260601 initial disclosure statement (D L)	Holly — reviewed	"Tightened para 3; confirm exhibit B date."
20260601 initial disclosure statement (D L D)	Dante — revised	"Para 3 updated; exhibit B date confirmed 28/05."
20260601 initial disclosure statement (D L D L)	Holly — approved ✓	"Approved. Move to Done & export to Clio."

HOW NOTES GET ADDED

Keep a one-line note with each change — a comment in the document or a line in a running log. The **initials** say who last touched it; the **note** says what changed. Together they are your complete revision history.

SECTION 3

Scenario transition guide

How the day-to-day evolves: drafting moves out of Clio and into Claude Teams, while Clio becomes the final system of record rather than the workshop.

□ Holly's tasks □ Dante / system support □ Handoff & system moves

The shift in one line: Clio stops being where work *happens* and becomes where finished work *lands*. Drafting and collaboration move into Claude Teams — faster to produce, easier to track — and a clean record still lives in Clio.

SECTION 4

The workflow flowchart — Dante & Holly

Two swimlanes, start to finish. Diamonds are decision points; gold hexagons are handoffs where one person must finish before the other continues.

□ Dante (paralegal) □ Holly (lawyer) □ Handoff point

If the diagram is blank, open this file in an up-to-date browser with internet access (the Mermaid renderer loads from a CDN).

SECTION 5

Holly solo — front end, from scratch

WHEN TO USE THIS

You're starting a brand-new disclosure yourself — no draft from Dante. You own the whole document, front to back.

- 1 **Open Claude Teams** and start a new disclosure draft from the playbook / template.
- 2 **Name the file right away** using the convention, with your initial: `20260601 initial disclosure statement (L)`
- 3 **Save it into**  **Shared / To Be Disclosed**. This is its home while you write.
- 4 **Draft in Claude Teams**, working from the template and the matter facts. Let Claude do the heavy lifting on structure and first language.
- 5 **Collect exhibits as you go** — keep them together so they're ready to file.
- 6 **Self-review** against the disclosure checklist (**Section 7**). Fix anything before it moves.
- 7 **Move the draft to**  **Disclosures**, and put every exhibit into  **Disclosures / Attachments**.
- 8 **Do your approval pass**. You're both author and approver here — keep your initial `(L)` as the sign-off on the trail.
- 9 **Move the finalised document to**  **Done**. Nothing changes after this.
- 10 **Export the final copy to Clio** (system of record), then file / serve.

SECTION 6

Holly solo — back end, finishing a started draft

WHEN TO USE THIS

Dante has already drafted the document and handed it over. You're picking it up to review, finish, and file.

- 1 Find Dante's draft in  **Shared / To Be Disclosed** — its name ends with  **(D)**.
- 2 Open it in **Claude Teams** and **read Dante's notes first** — he'll have flagged gaps or questions for you.
- 3 **Review the draft** against the matter and the checklist (**Section 7**).
- 4 Make your edits in the same file, then **append your initial**:  **(D)** →  **(D L)**.
- 5 Add a **short revision note** for anything significant you changed or need confirmed.
- 6 If you need Dante to **action something**, that's a handoff back — leave a note and let him pick it up (he'll append →  **(D L D)**). Otherwise, carry on.
- 7 Move it to  **Disclosures**; exhibits to  **Disclosures / Attachments**.
- 8 **Final approval pass** — the trail ends on your initial, e.g.  **(D L)**.
- 9 Move to  **Done**, then **export to Clio** and file / serve.

The disclosure checklist

WHEN TO USE THIS

Run this at the **self-review gate** — before any document leaves “To Be Disclosed”. Tick every box; if one can’t be ticked, it isn’t ready. The process items (naming, folders, sign-off) are non-negotiable; the substantive items are prompts — final judgement on legal sufficiency always rests with the lawyer. A standalone fillable copy is available to print and keep at your desk.

1 Intake & setup

- ☐ Matter open in **Clio**; client & matter confirmed.
- ☐ Disclosure **type** and **deadline** identified.
- ☐ All source documents gathered.
- ☐ Working from the approved **template / playbook**.

2 Naming & filing

- ☐ Named to convention: **YYYYMMDD description (initials)**
- ☐ Date first; description plain lowercase.
- ☐ Initials reflect who has touched it.
- ☐ Saved in the correct folder for its **stage**.
- ☐ One file — no duplicate versions.

3 Content & accuracy

- ☐ All required **sections** present.
- ☐ Names, dates & references correct.
- ☐ Figures & facts verified against **source**.
- ☐ Cross-references & exhibit labels match.
- ☐ No placeholders or “TBC” left in.
- ☐ Read end-to-end at least once.

4 Exhibits & attachments

- ☐ Every referenced exhibit is attached.
- ☐ Stored in **Disclosures / Attachments**.
- ☐ Each exhibit labelled & dated.
- ☐ No stray or privileged docs included.

5 Review & revision trail

- ☐ A **note** recorded for each significant change.
- ☐ Initials **appended** (not replaced).
- ☐ Outstanding questions flagged or resolved.
- ☐ Any handoff back is clearly noted.

6 Approval & filing

- ☐ Lawyer review complete; **approval** in the filename.
- ☐ No tracked changes / comments in the final.
- ☐ Moved to **Done** — locked.
- ☐ Final copy **exported to Clio**.
- ☐ Filed / served by deadline; confirmation saved.

SECTION 8

Agentic workflows — down the road

THE ONE RULE

An agent doesn't *invent* the process — it *executes* the one you've already proven works. It's the automation version of this playbook, and it only arrives **after** the manual process is stable (roughly 2–3 disclosures in).

NOW

Manual

Dante drafts, Holly approves — by hand. The job here is to **prove and document** the process until it stops changing.

SOON

Stable playbook

After a few disclosures, this document is solid and the steps don't shift between cases. That stability is the green light.

LATER

Agent-assisted

An agent runs the routine spine; Holly keeps the judgement and the final approval.

What the agent will and won't do

THE AGENT HANDLES (ROUTINE)

Drafts the first version from the template · applies the naming convention automatically · files it into the correct folder · gathers exhibits into Attachments · flags it for Holly with notes. Essentially, everything in Dante's lane that's the same every time.

HOLLY KEEPS (JUDGEMENT)

The review. The approval gate. Any case-specific call. Nothing is moved to Done, exported to Clio, or filed without her sign-off — the human is never removed from the disclosure handoff.

THE DIRECTION IS ONE-WAY

You move from a proven manual process, to a written playbook, to an agent — never the reverse. Skipping ahead just automates mistakes onto a process you haven't yet trusted.

Manual proof → Playbook → Agent

The agent lives alongside the team's other proven tools and executes this exact flowchart — the same lanes, the same naming convention, the same folder moves, the same approval gate. When it arrives, nothing about *what* good looks like changes; only *who* does the routine parts.
